Scoring by Frametra 3.9.32 · FC-MVVACIIO

At a glance

18 articles from 18 outlets, read by Frametra's on-device engine across six structural signals.

68

average structural score, range
49 to 80

15 of 18

articles with one charged word
or none

33–75

range in source attribution
scores

0 of 18

articles with full claim restraint

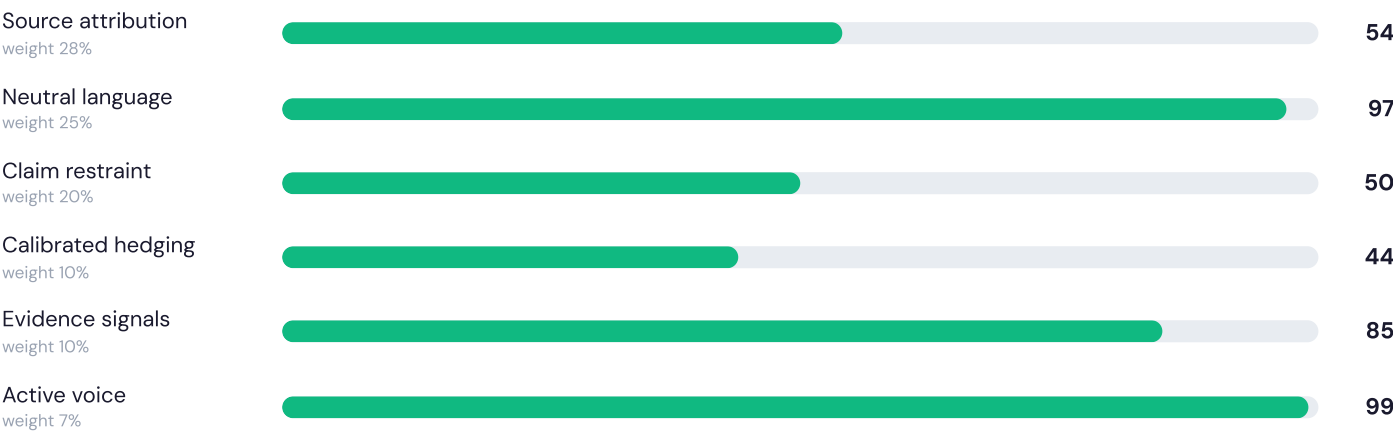

WHAT THE NUMBERS SHOW

- 1 The tone stayed measured.** Neutral language averaged 97 out of 100, and the lowest article scored 91. 10 articles used none of the engine's charged words and 15 used one or none.
- 2 Sourcing varied from article to article.** Source attribution ran from 33 to 75, averaging 54. 0 articles scored 80 or above and 8 scored below 50. Those below 50 are the pieces where a named source or a link is hardest to find.
- 3 Length and sourcing.** The 4 articles of 600 words or more averaged 46 on sourcing, against 57 for the 14 shorter ones (lower for the longer pieces). The engine measures attribution relative to length, so part of any gap reflects how the measure works.
- 4 Calibrated hedging was the weakest signal.** It averaged 44, against 99 for active voice, the strongest. Claim restraint averaged 50; 0 articles reached full restraint. The engine counts words such as "claims" and "alleges" against claim restraint, which is expected when articles report on allegations or court records.

How to read these scores. They describe how an article is built: its sourcing, wording and evidence. They do not say whether an article is accurate, fair or well-intentioned, and they are not a grade.

The six signals, across all 18 articles

Average score for each signal, out of 100. Weights show how much each signal counts toward the structural score.

BY ARTICLE LENGTH

	ARTICLES	AVG WORDS	SCORE	SOURCING	CLAIM RESTRAINT	EVIDENCE	CHARGED WORDS
Under 600 words	14	400	69	57	49	82	0.4
600 words or more	4	859	68	46	53	95	1.5

Sourcing = source attribution. Evidence = figures and direct quotations. Charged words = average per article.

Article by article

All 18 articles, grouped by outlet. Scores out of 100; values below 50 are shown in amber.

Src = source attribution. Lang = neutral language. Clm = claim restraint. Hdg = calibrated hedging. Evd = evidence signals. Act = active voice.

What this report does not cover

This report uses Frametra's free on-device engine, which reads each article's wording. It cannot say **who was quoted**, whether sources were **anonymous**, which voices were missing (for example the people involved), or whether a claim is true. Those need a closer read of the individual articles.

METHOD AND LIMITS

Each article was read from its public web page by Frametra's engine, on the reader's own device, and scored on six signals: source attribution (28% of the structural score), neutral language (25%), claim restraint (20%), calibrated hedging (10%), evidence signals (10%) and active voice (7%). Structural scores run from 22 to 95. Scores depend on the page text the engine could read; paywalled, very short or heavily formatted pages may be read only in part. Article formats such as features, analysis and opinion score differently from wire news by design, and the engine counts words such as "claims" and "alleges" against claim restraint. The set of articles was chosen by the preparer and is not a random sample, so results describe this set only. All sentences in this report are generated from the numbers by fixed rules.
